PAUL THISTLETON

BLOOD ANALYSES

I obtained the following data from Erik Kissa, Jackson Lab, 1/16 and 1/17.

NAME	ORGANIC FLUORIDE
	0.72 0.79 0.78 0.60 0.65 0.83 0.40
	0.58 0.55 0.63
Pawell Elineat	0.66 0.72

These values are low and do not support wider sampling of mechanics.

Seven long service Monomer Operators had 0.1 to 0.5 ppm organic fluoride (average 0.35 ppm). Eight semiworks laboratorians had 0.2 to 1.5 ppm organic fluoride (average 0.56 ppm). These results were obtained from samples taken in August, 1979.
